

The best free startup name generator that checks trademarks (2026)

Most name generators hand you names that are already taken or trademarked. Here is how the free tools compare on the one thing that matters: whether they screen a name against the trademark register before you build.

- **The test that matters.** Not how many names a tool spits out, but whether it checks each one against the trademark register, or just invents words.
- **What “checks trademarks” should mean.** A real search of the US (USPTO) and ideally EU (EUIPO) registers, by name and by class, not a vague “available” badge.
- **The free US check.** Startup Name Generator screens every name against the US register for free; the EU register is the paid upgrade for teams selling into Europe.
- **Available .com, checked live.** A name is only worth screening if you can also own the .com, verified against the registry in real time, not from a stale cache.

Generate names with a free .com and trademark check.

Read the full comparison, then generate brandable names with an available .com and a free US trademark check.
